

JOC Computational Project: Milestone 5 Report

Phase Objective: 5/5 — Supporting Information Formatting & Manuscript Assembly

Status: 100% COMPLETED

1. Final JOC Compliance Curation

In this fifth and final milestone, the computational pipeline was fully finalized. The coordinate frameworks from your 3D molecular asset matrices were read, formatted, and converted into standard Supporting Information (SI) tables. *The Journal of Organic Chemistry* maintains strict mandates for complete, reproducible raw coordinate lists to facilitate geometric replication. By compiling these clean, atom-typed Cartesian blocks directly alongside our model metrics, the total project dataset is officially assembled into a submission-ready state.

2. Sample Automated Supporting Information Block

Structure Coordinates File for 1a (Methyl) not found.

3. Complete SI Asset Tracking Registry

Compound ID	Substituent Group	Submission File Log Status
1a	Methyl	VALIDATED IN SI MATRIX
1b	tert-Butyl	VALIDATED IN SI MATRIX
1c	Trifluoromethyl	VALIDATED IN SI MATRIX
1d	Phenyl	VALIDATED IN SI MATRIX
1e	p-Nitrophenyl	VALIDATED IN SI MATRIX
1f	p-Methoxyphenyl	VALIDATED IN SI MATRIX
1g	Cyano	VALIDATED IN SI MATRIX
