To the Senior Editors,

The Journal of Organic Chemistry

American Chemical Society

Subject: Submission of Original Research Manuscript for Publication

Dear Editor,

I am pleased to submit our original research manuscript titled "Predictive QSAR Framework for Terminal Alkyn
e Acidity via Stereoelectronic Geometric Parsing" for consideration for publication as an Article in The Jou
rnal of Organic Chemistry. This research was co-authored with Ivara Samuel from the University of Cross Rive
r State, Calabar, Nigeria.

In this investigation, we present an interpretable and computationally efficient Quantitative Structure-Acti
vity Relationship (QSAR) framework that models the ground-state polarization of terminal alkynes. Utilizing
simple 3D Cartesian coordinates generated from low-overhead conformational minimizations, we successfully is
olate structural size metrics from localized inductive electronic parameters.

Importantly, our computational metrics demonstrate an excellent linear correlation ( $r = 0.812$ ) with classica
l empirical Hammett substituent parameters. This direct validation bridges the historical gap between digita
l database screening and classical physical-organic principles, avoiding the "black-box" limitations common
in modern machine-learning workflows. We believe these findings will significantly interest JOC readers work
ing in synthetic methodology, copper-catalyzed click chemistry, and computational physical chemistry.

This manuscript has not been published previously and is not under consideration for publication elsewhere.
All authors have reviewed and approved the submission of this work. Complete Cartesian coordinate datasets h
ave been formatted and provided in the accompanying Supporting Information file to ensure total reproducibil
ity.

Thank you very much for your time and consideration of our manuscript.

Sincerely,

Aniema Ekemini
